

JESUTOBA LOPEZ

+1 (931)-266-1695 | jesutobalopez@gmail.com | [linkedin.com/in/lopez-jesutoba](https://www.linkedin.com/in/lopez-jesutoba) | Clarksville, TN

PROFESSIONAL SUMMARY

Versatile software engineer with over 3 years of experience in backend development, DevOps, and web development. I am skilled in automating CI/CD pipelines, cloud migration, and enterprise monitoring. Proficient in Java, Node.js, C#, Python, and SQL, with expertise in tools like Terraform, Jenkins, and Grafana. Experience in fintech, delivering scalable solutions, optimizing databases, and enhancing system efficiency. Adept at API development, DevOps best practices, and cross-functional collaboration.

EDUCATION

Austin Peay State University, Clarksville, TN

May 2026 | GPA: 4.00/4.00

Master of Science in Computer Science and Quantitative Methods - Concentration: Predictive Analytics

University of Lagos,

Oct 2018 | GPA: 3.65/4.00

Bachelor of Science in Quantity Surveying

Relevant Coursework: Numerical and Statistical Methods, Bills of Quantity, Engineering, Cost Estimators, BOQ Database Management Concepts, Machine Learning and Deep Learning, Big Data Modelling, SQL, Regression Analysis, Predictive Analytics, Python for Machine Learning and Data Mining

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Python, R, PHP, HTML/CSS, SQL, MySQL, PostgreSQL, Node.js, JavaScript, React, Golang, TypeScript
- **Data:** Matplotlib, Power BI, Tableau, Microsoft Excel, Grafana, Pandas, NumPy, Scikit-learn, TensorFlow, Seaborn.
- **DevOps Tools:** Jenkins, Terraform, Ansible, Kong, Nutanix, Google Cloud, AWS, Kubernetes.
- **Artificial Intelligence & Machine Learning:** Artificial Intelligence (AI), Machine Learning, Deep Learning, Natural Language Processing (NLP), Large Language Models (LLMs), Prompt Engineering, Model Evaluation, Predictive Modeling, Feature Engineering, Classification, Regression, Clustering, Time Series Forecasting
- **Others:** GitHub, JIRA, REST APIs, Agile Methodologies, Data Structures and Algorithms, Software Development

WORK EXPERIENCE

Software Engineer

Inter-Bank Settlement System

Jul 2022 – Aug 2024

- Engineered backend systems using .NET (C#) and Java, improving database performance by 20%.
- Created RESTful APIs, increasing communication speed between front-end and back-end by 30%.
- Collaborated with teams to design over 4 scalable microservice architectures for critical financial operations on over 10 applications.
- Migrated 95% of application servers from VMware to Nutanix private cloud, reducing downtime by 40%.
- Provisioned infrastructure with Terraform, saving 15 hours weekly on code reviews through integration with GitHub.

Data Engineering Intern

Guardian Life Insurance - Bethlehem, PA

Jun 2025 – Aug 2025

- Built 10+ SQL tasks and Python scripts to transform and standardize datasets, reducing processing time by 40%.
- Automated workflows in Databricks for production pipelines, ensuring a 99% success rate in daily jobs.
- Modernized a legacy VBA-based form, eliminating 100% of security vulnerabilities flagged in compliance audits.
- Implemented GitHub branching and pull requests for version control, improving code review quality by 95%.

Graduate Teaching Assistant

Austin Peay State University – Clarksville, TN

Aug 2024 – Present

- Provide one-on-one and group tutoring for 20+ students, resulting in a 90% pass rate in their mathematics class.
- Led review sessions on data visualization, regression, and data mining techniques, improving student exam performance by 25%.

PROJECTS

CRUD Backend Application

- Designed a fully functional backend application that supported Create, Read, Update, and Delete (CRUD) operations for managing over 15000 users and product data.

NDD Project

- Built a payment solution, leading to a 35% increase in processing efficiency for recurring payments in the financial sector.

Web Application Performance Enhancement (*JavaScript, React*)

- Enhanced the performance of an e-commerce platform by reducing API response times by 25%.

Machine Learning Focus

- **Customer Risk Prediction Model:** Developed and evaluated machine learning models using Python and Scikit-Learn to predict customer behavior through feature engineering, model selection, and performance analysis.

Large Language Model (LLM) Evaluation Project: Evaluated AI-generated responses for accuracy, reasoning quality, factual consistency, and relevance using structured assessment frameworks to improve model performance and reliability.

PROFESSIONAL MEMBERSHIPS
